Magnus pairs in, and conjugacy separability of, limit groups

Friday, December 9, 2015
CUNY Graduate Center, Room C-201
5:30pm

Abstract:
For some limit groups there are pairs of nonconjugate elements whose image is conjugate in every free quotient. I will show two completely different ways this can happen. I will also show that NTQ groups or towers are freely conjugacy separable.

Joint work with Lars Louder.
