

## Table of Contents

### Section I – The Four Major Classes of Engineering Materials

#### 2 - Atomic Structure and Bonding

##### Performance Criteria

##### 2.1 The Planetary Model of an Atom

##### 2.2 The Wave Model of Electrons in an Atom

##### 2.3 The Energies of Electrons in Atoms

##### *Vignette 2A – The Generation and Use of X-rays*

##### 2.4 Attractive and Repulsive Interactions between Atoms

##### 2.5 Bonding Between Atoms and Molecular Orbitals

##### 2.6 Electronic Structure of Many-Atom Solids: Energy Bands

##### Problems

#### 3 - Metals and Alloys

##### Performance Criteria

##### 3.1 The Major Categories of Metals and Alloys

##### 3.2 The Principal Properties of Metals and Alloys

##### 3.3 Energy-Band Diagrams Characteristic of Metals

##### 3.4 Two Principal Methods of Shaping Metals

##### 3.4.1 Deformation Processing

##### 3.4.2 Solidification Processing

##### *Vignette 3A – Single-Crystal Turbine Blades for Jet Engines*

##### 3.5 The Structure of Solid Metals

##### 3.5.1 Crystalline vs. Amorphous Solids

##### 3.5.2 The 14 Bravais Lattices; SC, BCC, and FCC

##### 3.5.3 Points, Directions, and Planes in Cubic Crystals

##### 3.6 Defects in Crystals

##### Problems

#### 4 - Semiconductors and Ceramics

##### Performance Criteria

##### 4.1 The Major Categories of Semiconductors

##### 4.2 The Major Categories of Ceramics

##### 4.3 The Principal Properties of Semiconductors and Ceramics

##### 4.4 Energy-Band Diagrams Characteristic of Semiconductors and Ceramics

##### 4.5 Bonding in Ceramics and Semiconductors

##### 4.6 The Crystal Structures of Semiconductors and Ceramics

##### 4.7 Three Principal Methods of Shaping Ceramics

##### 4.7.1 Glass Formation

##### 4.7.2 Powder Processing

##### 4.7.3 Chemical Reactions and Cement

##### Problems

## 5 – Polymers

### Performance Criteria

#### 5.1 The Macromolecular Character of Polymers

##### 5.1.1 Monomers and Polymers

##### 5.1.2 Molecular Weight

##### 5.1.3 Conformations and Entanglements

#### 5.2 The Major Categories of Polymers

##### 5.2.1 Thermoplastic Polymers

##### *Vignette 5A – Resorbable Polymers for Tissue Engineering*

##### 5.2.2 Rubber

##### 5.2.3 Gels

##### 5.2.4 Thermoset Polymers

##### *Vignette 5B – UV-Cured Epoxies for Dentistry*

#### 5.3 The Principal Properties of Polymers

#### 5.4 Secondary Bonds Polymers and Energy Band Diagrams

#### 5.5 The Structure of Polymers

##### 5.5.1 Crystalline and Semicrystalline Polymers

##### 5.5.2 Amorphous Polymers

### Problems

## **Section II – Materials for Structural Applications**

### 6. The Mechanical Properties of Materials

#### Performance Criteria

#### 6.1 Stress and Strain

#### 6.2 The Tensile Test

#### 6.3 The Tensile Properties of Materials

#### 6.4 The Role of Dislocations in Plasticity

#### 6.5 Hardness

#### 6.6 Strengthening Mechanisms

#### 6.7 Brittle Fracture

##### *Vignette 6A – Nondestructive Evaluation*

#### 6.8 Fatigue

##### *Vignette 6B – Fatigue Failure of a Femoral Nail*

#### 6.9 Creep

#### 6.10 Composite Materials

### Problems

### 7. Phase Transformations

#### Performance Criteria

#### 7.1 Definition of a Phase and Examples

##### *Vignette 7A – Granite*

#### 7.2 The Thermodynamic Driving Force

#### 7.3 Mass Transport in Solids

- 7.3.1 Fick's First Law and The Definition of Diffusivity  
*Vignette 7B – Dialysis*
- 7.3.2 Fick's Second Law – The Time Dependence of Compositional Change
- 7.3.3 The Temperature Dependence of Diffusion
- 7.3.4 The Vacancy Mechanism of Solid-State Diffusion
- 7.4 Surfaces and Surface Energy
- 7.5 Coarsening Phenomena
  - spheroidizing
  - grain growth
  - sintering*Vignette 7C – Roughened Surfaces for Hip Implants*
- 7.6 Nucleation
  - 7.6.1 Homogeneous Nucleation
  - 7.6.2 Nucleation Catalysts and Heterogeneous Nucleation
- 7.7 Growth
- Problems

- 8. Phase Diagrams and Alloy Systems
- Performance Criteria
- 8.1 Phases and the Pressure-Temperature Phase Diagram for Water
- 8.2 The Hume Rothery Rules and The Extent of Solid Solubility
- 8.3 Phases and Multiphase Systems
- 8.4 Isomorphous Phase Diagrams – The Si-Ge System
- 8.5 Eutectic Phase Diagrams – The Sn-Bi System  
*Vignette 7B – Solders*
- 8.6 Compounds – The Ge-Te System
- 8.7 The Fe-C System
  - 8.7.1 The Fe-Fe<sub>3</sub>C Phase Diagram
  - 8.7.2 Martensite
  - 8.7.3 TTT/CCT Diagrams
- 8.8 The Al-Cu System
  - 8.8.1 The Al-Cu Phase Diagram
  - 8.8.2 Precipitation Hardening
- Problems

### **Section III – Materials for Functional Applications**

- 9. Electrical Properties of Materials
- Performance Criteria
- 9.1 Ohm's Law, Resistance, and Resistivity
- 9.2 Electrical Current: Electron Density and Electron Scattering
  - 9.2.1 Metals and Alloys
  - 9.2.2 Semiconductors and Ceramics
- 9.3 Doping of Semiconductors

- 9.4 The P-N Junction
- 9.5 Semiconductor Devices
- 9.6 Semiconductor Device Process
  - 9.6.1 The MOSFET
  - 9.6.2 Single-crystal growth
  - 9.6.3 Oxidation of silicon
  - 9.6.4 Lithographic Patterning
  - 9.6.5 Doping by ion implantation or in diffusion
  - 9.6.6 Thin-film deposition
  - 9.6.7 Packaging

*Vignette 9A – MEMS Devices*

Problems

- 10. Magnetic Properties of Materials
- Performance Criteria
- 10.1 Applications of Magnetic Materials
- 10.2 The Atomic Origin of Magnetic Behavior
- 10.3 Magnetic Domains
- 10.4 Hard and Soft Magnets
- 10.5 Magnetic Data Storage
- Problems

- 11. Optical Properties of Materials

#### **Section IV – Materials for Chemical and Biochemical Applications**

- 12. Oxidation and Oxidation-Resistant Materials
- 13. Corrosion and Corrosion-Resistant Materials
- 14. Biofouling and Anti-fouling Materials

#### **Appendices**

- A. Properties of Selected Elements
- B. Selected Physical Constants
- C. Selected Binary Phase Diagrams
- D.
- E.
