The view from Stevens is exceptional.

So is the opportunity.

What strikes everyone when they first come to the beautiful, green campus of Stevens Institute of Technology in the heart of Hoboken, New Jersey is the exquisite view of the Manhattan skyline from across the Hudson River. It is breathtaking and also full of opportunity. The view symbolizes the promise of everything from entertainment to enterprise. It holds one of the world’s most influential financial centers and is a hub for commerce.

It’s an exciting view from Stevens. But there’s an even better one.

Within Stevens, our best view is of our students. And they are spectacular. Full of interests, curiosity and enthusiasm, Stevens students are here to change the world. And our job is to give them the knowledge, experience and confidence to do it. That’s why our classes are designed to provide real-world know-how, to equip our students to solve problems that will benefit society and to lead them to successful careers that make an impact on our planet.

Opportunity is here for those with the drive to find it.

We invite you to experience it for yourself.
The one thing our students have in common…

is that they are uncommon.

**Individuals with interests**

What kind of student goes to Stevens? The answer may surprise you. While Stevens attracts many different types—techies, entrepreneurs, artists, musicians—most of them have a combination of skills and passions. Our students are well-rounded, with a tremendous range of interests. They are engineers who are talented musicians, artists who are gifted programmers, stock market enthusiasts who are history buffs, scientists with a record-breaking 50-free in the pool.

Our students are big thinkers who are driven to learn, explore and try new things. They are open to opportunities that extend their reach. They work hard. But they also play hard. And that motivation results in success in their coursework, in their extra-curricular activities and, ultimately, their careers.

There is one other thing our students have in common:

*They all are pursuing their passions right here at Stevens.*
Stevens impacts students as much as they impact the world.

A big decision with a big payoff
It’s not easy choosing the right school, but it makes all the difference when you’re following the right path to your future. Our Office of Career Development starts working with students on professional development right from day one. The outcome is clear: our students are regularly recruited by top employers. In fact, a recent PayScale survey ranked Stevens 5th in the nation among all colleges and universities for 20-year net return on investment.

Returning more than just an investment
For Stevens students, “ROI” means a return on investment, innovation and inspiration. Our students look for opportunities to use their talents to impact the world around them. The fact that they are in great demand speaks volumes about their experience at Stevens. And here are some figures that speak volumes about Stevens:

- Ranked 5th in the nation for return on investment by PayScale.com
- 49% of the class of 2014 received multiple job offers before graduation
- Average starting salary for the class of 2014 was $65,600
- 94% of students secured jobs or enrolled in graduate, law or medical school within six months of graduation
- Ranked 15th in Best Career Services by The Princeton Review
- Ranked 3rd in the nation for alumni with the highest mid-career salaries by PayScale.com
- Ranked on U.S. News & World Report’s 2012 “Short List” of 10 national universities that produce the most interns

stevens.edu/advantages

The Stevens experience extends far beyond Hoboken. Real-world work experiences, volunteer projects and study abroad cultivate local, national and international perspectives.
Working in the “real world” is just another day at Stevens.

Putting learning to work
Does the real world start when college ends? Not at Stevens. Here, students begin their work experiences early on. Through several avenues, undergraduates can define and pursue their interests while making important contributions to their chosen fields. They can take full advantage of our proximity to major metropolitan business and tech areas.

Cooperative Education experiences allow students to confirm their choice of major, clarify their interests and focus on career goals while working in paid, full-time positions, often with widely recognized and prestigious companies in nearby Manhattan and the metropolitan area. Five assignments will amount to two full years of real-world work experience on your resume.

Research opportunities are not just for graduate students. At Stevens, undergrads are strongly encouraged to participate in faculty-mentored research. The excitement of making discoveries allows students to proactively become familiar with the research process, developing critical thinking and problem-solving skills.

Internships allow students to gain work experience during the summer and the school year. Our dedicated career development staff works with students to identify, prepare for and land competitive internships.

Students in the Maritime Security Lab look for ways to advance situational awareness and surveillance capabilities for our nation’s first responders.
A CLOSER LOOK ➤

Ecohabit, the Stevens team’s entry in the 2013 Solar Decathlon competition, was truly innovation in action, employing cutting-edge advancements in green technology, revolutionary renewable energy and sustainable living practices. For the 2015 competition, the “SURE HOUSE” forms the core of a broader research and development enterprise at Stevens in partnership with major stakeholders in the New York metropolitan region, focused on sustainable and resilient home design that protects coastal communities.

Watch how it was built.

stevens.edu/collaboration

What can happen when artists, engineers, computer scientists and business majors join forces?

Everything.

Cross-disciplinary triumphs

Imagine a net-zero, solar powered home built with sustainability and resiliency in mind – a house that protects against the impact of extreme weather events in coastal communities. Stevens students are doing more than imagining it. They are conceiving, designing and building the “SURE HOUSE” for the U.S. Department of Energy’s 2015 Solar Decathlon. The university’s third consecutive invitation to participate in the competition follows the award-winning entry “Ecohabit” in 2013, which placed 2nd in the U.S. and 4th globally. Stevens students prove that channeling talents across disciplines can achieve great impact.

Empowerment for real-world challenges

Collaborative projects are at the core of the Stevens experience – through exciting research projects like Perseus (see opposite page), and as part of the capstone senior design project, where knowledge gained in the classroom is applied to a major design or research project. These experiences allow students to tackle real-world problems, often sponsored or supported by partners in industry. The outcomes: real knowledge, real applications, real advantages for our students.

A CLOSER LOOK ➤

Mechanical and naval engineering majors teamed with computer science students to successfully launch a test run of Perseus, an unmanned underwater vehicle that uses sonar to locate unexploded objects in water.

LEARN MORE AT STEVENS.EDU
Our world has major challenges.

Which is why we offer such relevant majors.

Rigorous and rewarding academics
The problems of our world stretch far and wide. The 35+ majors we offer—divided across four disciplines—are geared toward teaching our students how to solve those problems. Hard-working and socially conscious, our students come to Stevens for the kind of learning and experiences that will help them make an impact. And they get close, personal attention from faculty advisers who share the same interests.

Stevens’ majors include cutting-edge programs in business, the humanities, arts, engineering, the sciences and computer science.

Subjects that complement each other
Stevens is a school rooted in technology, but with branches in many directions. By experiencing a broad range of subjects, students find new ways to think about the world. Our students study humanities, social sciences and the arts...with a difference. They explore these disciplines with a deep understanding of technology, making them relevant in a modern context.

For example, our students study business, understanding that successful companies rely on technology to drive performance, just as technology requires good business skills to drive its usage. All learning at Stevens is designed to be applied to the real world. Not just after graduation, but right here, right now. Ultimately, each student will complete a Capstone Project—a team-oriented, hands-on culmination of the Stevens learning experience.

PROBLEM-SOLVING INSPIRES US.

what INSPIRES you?
It’s not just where you live, it’s how you live.

It’s all about community. At Stevens, students experience not one, but a concentric ring of communities, filled with things to do and places to see.

**It starts on campus.** Live music at Techfest and Boken. The formal ball on Founder’s Day. The popular Castle Point Anime Convention. The diversity of the Unity Show. The convenience of residence halls, apartment-style living and special-interest housing. Ours is a secure, close-knit community where students live, collaborate and play. They tend to take “seize the day” to a whole new level.

**Then Hoboken.** Just down the street is a city of coffeehouses, cafes, health clubs, shopping and more. Forbes considers it one of the most walkable cities in America. The home of Cake Boss, Hoboken is also our hometown, ranked the 14th Best College Town by *The Princeton Review*, and the place where our students give back through community service and local volunteering. And did we mention the world’s largest pizza slice?

**Then across the river to Manhattan.** Minutes away, but close enough to visit for a few hours or spend the day. Our students go there to take in a play, visit a museum or enjoy the diversity of restaurants. It’s the Big Apple. Come take a bite!

**Then across the ocean.** Traveling the world is a rich, rewarding, never-to-be-forgotten adventure. Study abroad options, Engineers Without Borders trips, excursions during winter and spring break, and global internships are a just a few other ways our students experience the world.
If there’s a limit to all you can do and see here... We haven’t found it yet.

There’s enough on our Hoboken campus to keep you busy, but with outrageously close access to Manhattan, Philadelphia and more, why stop there? By foot, car or public transportation, you can enjoy all that our area has to offer. Hop on a bus, a ferry, or a train, all walking distance from campus, and access the metro area in minutes.

Arrange a visit

The best way to find out all about life and learning at Stevens is to see the campus and attend events that will help you in your college search.

Visit Days: These in-depth events include an information session, student panel and guided campus tour.

Tours: Student-led campus tours are available throughout the year.

Interviews: An interview is a recommended component of the application process and is required for students applying to our accelerated programs.

Attend a Class: A variety of classes are available for prospective students to attend, including courses in business, computer science, engineering, humanities, math or technology and the arts.

Academic Tours: Tours of specific colleges and departments are offered weekly during the school year.

Information Sessions: These personalized sessions will give you the opportunity to learn about our programs, the admissions process, and life at Stevens.

Arrange your visit today: www.stevens.edu/visit

Start an application

Stevens offers an online application and is also a member of the Common Application. Refer to stevens.edu/apply for specific application requirements.

Key application deadlines

- Early Decision I: November 15
- Accelerated Pre-Med: January 1
- Early Decision II: January 15
- Regular Decision: February 1
- Transfer for spring semester: November 1
- Transfer for fall semester: July 1

If you have any questions, please contact the Office of Undergraduate Admissions at 800-STEVENS or email admissions@stevens.edu.

Visit www.stevens.edu/apply.

THE STEVENS SUMMER

PRECOLLEGE PROGRAMS for HIGH SCHOOL STUDENTS

Rising juniors and seniors are invited to experience Stevens through the Stevens Summer. Gain hands-on, applied experience, access industry professionals, experience campus life and participate in college prep workshops.

Programs include:
- Engineering & Science
- Business
- Computer Science
- Multimedia Production
- Pre-Med Science & Engineering
- Engineering Game Design
- Science, Technology, & Society
- Innovation & Entrepreneurship

To learn more, visit: stevens.edu/summer
What inspires you is what makes you move. What drives you to learn, to reach, to try, to ask and, ultimately, to succeed. It's what gives you purpose, motivation and enthusiasm.

What inspires you is what makes you decide to attend a school that engages your existing interests…and creates new ones.

What inspires you can be a place where the goal of learning is not only doing well on exams, but doing exceptional things on this planet.

What inspires you can be discovering that working with people you thought you had nothing in common with creates a stronger bond than you've ever experienced before.

What inspires you might be the joy of finding that you can pursue your passions.

And what inspires you…might just be here at Stevens.
