

The LOK Test Corp. team had been requested by their client, VISIONCUBE, to develop a series of mechanical apparatus designs that will be utilized for product performance, quality, and rehab testing. The team created 3-dimensional drawings of each apparatus design and included base-case dimensions. The team has compiled a general listing of required components to fabricate each apparatus.

VISIONCUBE is a key client among LOK Test Corp.'s group of target customers; this target group includes medical device manufacturers, hi-tech product manufacturers, and consumer products manufacturers in the continental United States that seek services for product performance, quality, and reliability testing.
