

*Scanning Solutions* is a senior design group which developed a Biometric Fingerprint Access Control System headlined by Bioscrypt Inc., the leader in identity verification technology. Stevens Institute of Technology is the group's primary target for the project, because various areas within the campus can benefit from a biometric upgrade. Furthermore, the Stevens campus is supposed to be a closed campus. Currently, Stevens has no security protocols in place to further support the existing identification card security system that regulates the amount of visitors on the Stevens Campus.

The Technology Information Services department, headed by Mr. Eric Rosenberg, gave *Scanning Solutions* the expertise and guidance needed to successfully develop a complete, cost effective implementation plan for the campus of Stevens Institute of Technology.
