*Elementary equivalence of derivative structures of classical  
and universal algebras and second order logic*

Friday, February 6, 2015

CUNY Graduate Center, Room 4102

11:00am

*Abstract:*

We give a survey of results in this direction for last 50–60 years (with some accents on recent results on elementary equivalence of endomorphism rings and automorphism groups of Abelian  $p$ -groups (E. I. Bunina, A. V. Mikhalev, and M. Rojzner, 2013–2014)).
