The Technology Management master’s program at Stevens offers a uniquely technology-centric exploration of leadership concepts. This program combines the core of an MBA with deep dives in strategy and innovation, all presented from the vantage point of a leader who must be capable of using new and emerging technologies to make faster, smarter decisions.

**CURRICULUM OVERVIEW**

The Technology Management curriculum is structured into two blocks designed to develop core skills in each important area.

**BUSINESS FOUNDATION**

Courses in this block form the core of any MBA program. The technology flavor of Stevens classes, however, sets these courses apart. Here, you'll learn how technology is a major driver of strategy across business disciplines. You'll also discover your inner leader and cultivate your own leadership style as you learn to motivate teams and attack corporate missions with fearlessness — lessons you'll apply during a weekend leadership retreat at West Point.

- Team Leadership Development
- Economics
- Financial and Managerial Accounting
- Financial Management
- Managing Emerging Technology
- Marketing Strategy

**STRATEGIC PERSPECTIVE**

Courses in the strategy block will push you to think critically about how the organization functions, to help you find value in unexpected places throughout the company.

- Design Thinking
- Strategic Management
- Corporate Entrepreneurship
- Operations Management

**PROGRAM DELIVERY**

As a Technology Management student, you'll take classes with the same cohort of professionals throughout your Stevens experience. The perspective of such a variety of professionals adds invaluable depth to your courses and gives you a close network to draw on for years after graduation.

Classes are held on campus during alternating Saturdays, offering greater flexibility and convenience for your busy schedule. Most students who enroll in the Technology Management program go on to complete an additional year of studies and graduate with an Executive MBA.
